(20)	Fire Alarm Call Point

Designing For The Future
 The design of a building should take into account the needs of the future. This includes the use of sustainable materials, energy-efficient systems, and flexible spaces that can adapt to changing needs. The goal is to create a building that is not only functional and safe but also environmentally responsible and cost-effective in the long run.

UNIT 1
 This unit is designed for a small-scale commercial use, such as a cafe or a boutique. It features a compact kitchen, restrooms, and a small bar area. The layout is efficient and makes use of every square foot.

UNIT 2
 This unit is designed for a larger-scale commercial use, such as a lounge or a restaurant. It features a large open area, a full bar, and a kitchen. The layout is flexible and can be adapted to suit different types of businesses.

GENERAL NOTES
 All dimensions are in feet and inches. All materials and finishes are to be selected by the architect. All work is to be completed in accordance with the applicable building codes and standards.
